

Minnesota Comprehensive Assessment – Series II (MCA-II)

Questions and Answers about the Mathematics, Reading and Science MCA-IIs

What are the MCA-IIs?

The Minnesota Comprehensive Assessments – Series II (MCA-IIs) are the state tests in reading, mathematics and science that meet the requirements of the federal No Child Left Behind (NCLB) Act. These tests are given every year to measure student performance on the Minnesota Academic Standards, which define what our students should know and do in a particular grade. The Reading and Mathematics MCA-IIs began in 2006 and Science MCA-II begins in 2008.

Why do we give these tests?

We use the MCA-IIs to find out how well students can apply the Minnesota Academic Standards in mathematics, reading and science. The mathematics and reading tests are also used to determine whether schools and districts have made Adequate Yearly Progress (AYP) toward all students being proficient for the No Child Left Behind Act.

After your child takes one of these tests, your school district sends you an individual student report that explains your child's results. This report gives you information on your child's reading, mathematics and science skills and shows your child's performance compared to that of other students in the state.

Schools use the information from these tests to improve classroom teaching and learning. Teachers and principals

look for areas where students do well so they can reinforce the ways they teach these skills. They also look for topics that need improvement so they can alter the ways they teach them or increase the instructional time they give them.

Who must take these tests?

Minnesota's rules for testing and the federal No Child Left Behind Act require that mathematics and reading tests be given in grades 3-8. In addition, students in grade 10 take the Reading MCA-II, and students in grade 11 take the Mathematics MCA-II. With very few exceptions, all public school students in grades 3-8 take the Reading and Mathematics MCA-IIs. In some cases, English Language Learners (ELL) will take the Mathematics Test for English Language Learners (MTELL). The severely cognitively disabled students will take the Minnesota Test of Academic Skills (MTAS).

What does it take to pass the tests?

Students do not pass or fail these tests. Each student receives a score that falls in one of four achievement levels – Does Not Meet the Standards, Partially Meets the Standards, Meets the Standards and Exceeds the Standards.

What is the format of the tests?

The Mathematics and Reading MCA-IIs are paper and pencil tests that are divided into four segments. Each

segment has multiple-choice questions and one or two short answer, or constructed-response, questions. Students must attempt at least four questions in each of the four segments in order to receive a score. There is no penalty for guessing.

The Science MCA-II has multiple-choice and short-answer, or constructed-response questions, as well as figural-response questions. Students respond to figural-response questions by manipulating graphic elements of an item, selecting a point on a graphic or completing a graph or diagram.

What is covered on the MCA-II?

All questions are based the [Minnesota Academic Standards](http://education.state.mn.us).
(<http://education.state.mn.us> – under Academic Excellence: Academic Standards)

What are the guidelines for using a calculator on the Mathematics or Science MCA-II?

Grades 3 and 4 have two non-calculator segments and two calculator-available segments. Grades 5-8 have one segment that does not allow the use of a calculator and three that do. A calculator may be used on all four segments of the Grade 11 Mathematics MCA-II.

Students can use a four-function or scientific calculator on the tests. The

calculator can belong to either the student or the school. Students cannot share calculators with other students during the test or use any calculator manuals.

How can I see the MCA-II results for my child, school and district?

All test results are sent to the school district. The district will deliver your child's results to you. You can see the results for all schools and districts at the Minnesota Department of Education [Website](#). Click on "Academic Excellence" and then "School Report Cards." Science results will be available in 2008.

How can students prepare for the tests?

Please see our handout , "Test Preparation Suggestions for Students, Teachers and Parents," under the [Assessments section](#) of our Website for tips on content preparation, general test taking and calculator use.
